Assessment of in-service training

H16105 Course V Ethical considerations and leadership in global nursing

Student's name _____

Student's Swedish Civil Registration Number _____

Supervisor/Head _____

Ward/unit _____

Planning

Introduction of fire and safety routines _____

Date for discussion for the formulation of objectives _____

Date for mid-placement assessment _____

Date for final assessment _____

The student must accept and promote Röda Korsets Högskola's common values in respect of high quality, ethical behaviour and social commitment, as well as participation, transparency, equality and diversity. Display a serious commitment to the nursing profession and its duties. Be open to constructive criticism and committed to self-development and acceptance of responsibility. Display excellent teamwork skills with colleagues and other personnel.

Röda Korsets Högskola examines the learning objectives of the course in accordance with a two-grade scale, P or F. BeVut is formulated using the criteria for the learning objectives. The course objectives are discussed with the student during the mid-placement assessment, when a formative discussion takes place which is intended to stimulate continual learning and development. This is followed up at the final assessment.

All the pages in the form are to be treated as one cohesive document. The form is completed by an adjunct clinical assistant professor (Swedish acronym: AKA)/Supervisor and the student. The completed form is uploaded by the student onto the Canvas learning platform immediately after the Clinical Practice (VFU) period has been completed.
